If you've been following our coverage of "Snow White and the Huntsman," you're likely aware that we've been lucky enough to spend some quality time with the fun-loving and charming Charlize Theron. And while we've enjoyed her tales of dangerous costumes and the "angular nudity" that was involved with that production, we cannot ignore the fact that the South African-born beauty is in another highly anticipated blockbuster this summer, "Prometheus."

In knowing that the majority of the plot details of Ridley Scott's "Alien"-esque film are top secret, we knew that Theron wouldn't be able to reveal any major spoilers, so when we brought up the subject with her recently we went at it from a different angle, asking about her co-star Michael Fassbender's performance. Specifically, how much will we see of his celebrity-celebrated penis?

"Oh my god. I don't think it was available," Theron deadpanned when we asked exactly how much of Fassbender's member made the final cut. "It was shooting the sequel for 'Shame' so we couldn't get it for 'Prometheus.' "

Theron continued with the joke and claimed that she never got an opportunity to see it in the flesh (pun intended) because "it" was always working somewhere else.

"I had to see it, because it was gone, so it was on dailies from New York. It's a hitch penis," she added with a laugh. "The penis attaches and works separately, it's a whole working entity."

Just to clarify, there is no Fassbender penis in "Prometheus." All we know for sure about the Oscar-nominated actor's work in the film is that he plays a technically advanced android.

"David [is] a robot on board, kind of like a butler in space," Fassbender has said about his role as a human-like android that works as the ship's maintenance man. "He's making sure that everybody is going through cryostasis correctly, that the ship's in good working order, and that they're on course to go where they need to go."

Check out everything we've got on "Prometheus" and "Snow White and the Huntsman."
